

Sheldahl created a perfect solution over 40 years ago when it patented the Sheldahl brand unidirectional splicing system. This system combines tape, adhesive, curative, and your belt material, optimized for high-performance and cost-effectiveness. Sanding, abrasive grinding, and polishing belts run at accelerated speeds, creating high temperatures during operation.

Dependable tapes are required for bonding the two sides of the endless belts together to keep them from operational malfunctions. Unidirectional tapes are a cost-effective and durable solution that increases the lifecycle of abrasive belts.

## Technical Table

Product Name	Colour	Product Code	Tape Thickness (max.) (mm)	Tensile Strength (min.) (N/cm)	Grit Range
Pink		T1880	0,094	290	120+
Blue		T1884	0,185	542	40-100
White		T1882	0,145	402	60-120
Pearl White		T9071	0,152	490	60-120
Yellow		T1930	0,069	175	320+
Green		T1886	0,239	595	16-60
Fabric		T1878	0,178	420	Hepsi

**yurt**

yurtglobal.com

**Pink**  
T1880

Thin, highest flex.

**Yellow**  
T1930

Ultra thin, for finest grit applications.

**Blue**  
T1884

High tensile along with good flex.

**Green**  
T1886

Highest strength, strong abrasion and hinge resistance.

**White**  
T1882

Versatile combination of flex and strength.

**Fabric**  
T1878

Flexible, in air tools with non-woven applications for surface conditioning.

**Pearl White**  
T9071

Versatile, superior strength and flex, rougher surface.
